12th	2017-2018
K.S.K.I.C. Lotan Siddharth Nagar (UP) India	
10th	2015-2016
Bal Jyoti Madhyamik Vidyalaya (Nepal)	

PROFESSIONAL EXPERIENCE

SoftwareEngineer

Globaltekz Solution   july 2024 - june 2025

PROJECTS:

- Nddds (India):

I have experience customizing existing models, particularly in sales. I developed a new tab with one2many fields that allows for project creation using sale order line products. This functionality enables the automatic generation of multiple tasks, where the completion of one task triggers the creation of another. Additionally, I integrated multiple salespersons from CRM, sales, and contact records, ensuring visibility of CRM leads, sale orders, and contact records through customized access rules. I also designed a customized dashboard featuring multiple cards that open new form views upon interaction, and I have worked on generating reports in both XLSX and PDF formats.

- Prince Graphic (India):

Developing a project from scratch by customizing the credit amount workflow to manage credit days,credit amount and approval levels.
Customizing the job card workflow, which includes generating tokens upon receiving customer orders, managing team assignments, and handling multiple delivery scenarios (single and multi-delivery) based on customer locations. Additionally, customizing the invoice workflow to ensure all details are editable when orders are delivered but not invoiced. Also responsible for customizing PDF and XLSX report templates. The project utilizes base modules including Sales, Purchase, Contacts, Manufacturing, Inventory, and Accounting.

JrOdooDeveloper

Captiva India   Jan 2024 – June 2024

PROJECTS:

- Internal ERP:

I have worked with custom module and added some functionality like: Generate the employee timesheet and our manager can see our timesheet. When employee generate the timesheet after that manager give the feedback in the bases of employee timesheet.
 When we select any product then add the offer automatically for limited time. Offer have two categories first one is single offer and combine offer. I have created one Boolean field if Boolean field is true that means offer is added and if Boolean is false then created the new task automatically for the current product and inside the task we have one timesheet. Inside the timesheet set the product quantity as a allocated hour are less then hour spent it will display the validation error.
Customization of record rules and access right.

Freelancing   Sep 2023 - Dec 2023
PROJECTS:

- Harp chemical (Tanzania):

I have customized some functionality like: Created new menu item and open one form view when we click the menu item. Inside the form view I have generated seif token and added one option for select the vehicle and when we select the vehicle then display all the details about the vehicle as well as driver.

Inside the purchase order generated inward token. When driver reached the company then security match the sale order token

and purchase order inward token. If both token are matched then driver and vehicle can enter inside the company. Also Customized some Q web reports as well as XLSX reports.

Associate Software Engineer
Brainvire Infotech   June 2022 - July 2023

PROJECTS:

- Foodbank (Singapore):

I have worked in the backend side. I have customized some functionality like: I have added one table with multiple columns inside the customer preview in sale module. When we add the customer in the table then fetch the all details in the current customer and display inside the table.
            I have customized some functionality in the Fleet module like: When we are selecting the any vehicle on the bases of food quantity then fetch the all details about the driver and vehicle and display the details.

Customize the Q web Report for multiple modules like: sale, fleet, purchase, etc.

- Gafco (Saudi Arabia):

I have worked some customize some functionality like: When we go to contact module and select customer then open the dashboard in the current customer. Inside the dashboard display the multiple cards and display all sale order information regarding the current selected customer.
 I have added some features in the base of base modules from CRM, Contacts, sale, purchase, stock inventory etc.

- Arctx (Armnia):

I have added some functionality like: When any employee resigns the company then employee need to send the resign request with all his details and when he submit the request then request go to his manager for approved the request. When manager reject the request then request go to the reject state and if manager approved the reques, then request go for the second and final approver. After approve the final request employee go to the Archive mode automatically. Sometime manager can be terminate the employee directly.

If any employee goes to the any other country trip then employee have to inform the company at least 40 days before. IF employee go to the same country trip then employee have to inform the company at least 10 days before. When employee request for the trip then manager approved his/her trip request. After approved employee can go to the trip and also employee create the expense for food, travelling, etc. When employee came after the trip then after employee go to the manager for approver. Then company returns the all expense and employee give the review regarding the trip. Customize some Q web report and XLSX Report.

- Accessory Geeks (Korea): 1] I have

worked on migration in Odoo 14 to Odoo 16.
